Device Installation

Installation Precautions

To avoid damage to the switch or personal injury caused by improper use, please follow up the below precautions:

1. During the installation procedure, wear an anti-static wristband, keep the switch powered off. Ensure that the input voltage under the input voltage range.
2. Ensure that the heat dissipation holes of the switch are well ventilated.
3. Do not disassemble the switch.
4. Do not supply power to the switch before cleaning it. Do not use any liquid to scrub the switch.
5. Keep the switch far away from power lines, lights, and power grids.

Note

A tamper-evident seal is sealed on a mounting screw of the switch chassis. When the agent maintains the switch, the maintenance switch is required. The seal remains intact. If the user needs to open the switch case, please obtain the permission of the local agent. Otherwise, due to all consequences caused by opening the cabinet will be borne by the user himself.

Prepare the installation tools

1. Static bracelet
2. Screw driver
3. Optional: flat-blade screw driver, needle-nose pliers, diagonal pliers

Install the switch into a 19-inch standard cabinet

Step 1: Check the grounding and stability of the rack-mountable.

Step 2: Use the screws to fix the two L-shaped brackets on both sides of the switch.

Step 3: Place the switch in a proper position in the rack, and fix the L-shaped brackets on the guide grooves at both ends of the rack with screws (if users required) to ensure that the switch is installed on the rack smoothly

Install the switch to the desktop

After sticking the foot pads on the four corners of the bottom surface of the switch, please place and keep the switch face up on the stable desktop.

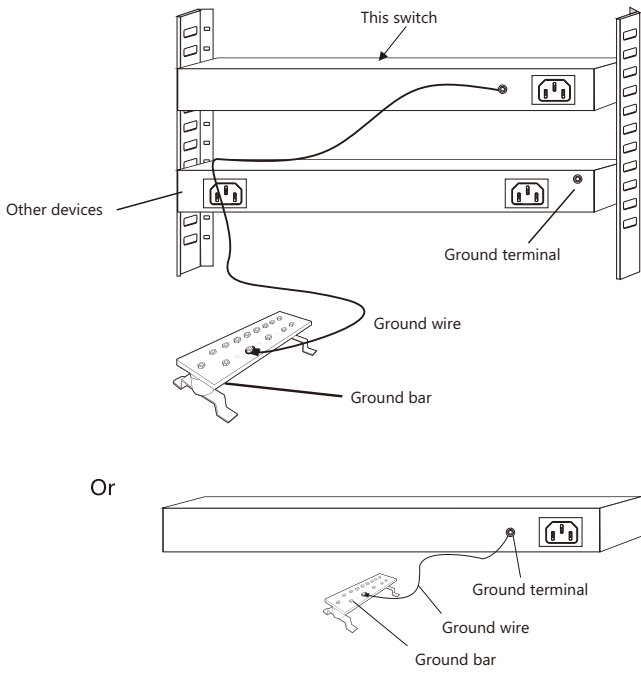

Hardware connection

Connect Rj45 port

Connect one end of the network cable to the Rj45 port of the switch, and the other end to the Rj45 Ethernet port of the opposite network device.

- Step 1:** Connect one end of the ground wire to the ground terminal of the switch
- Step 2:** Connect the other end of the ground wire to other equipment that has been grounded or directly connect it to the ground bar of the equipment room engineering terminal.

Note
The ground wire of the switch should be connected to the engineering ground of the equipment room. The grounding fire water pipe and the lightning rod of building are not properly grounded.
